Xamarin vs Xamarin.Forms

Xamarin's Default App Architecture

Xamarin.Forms App Architecture

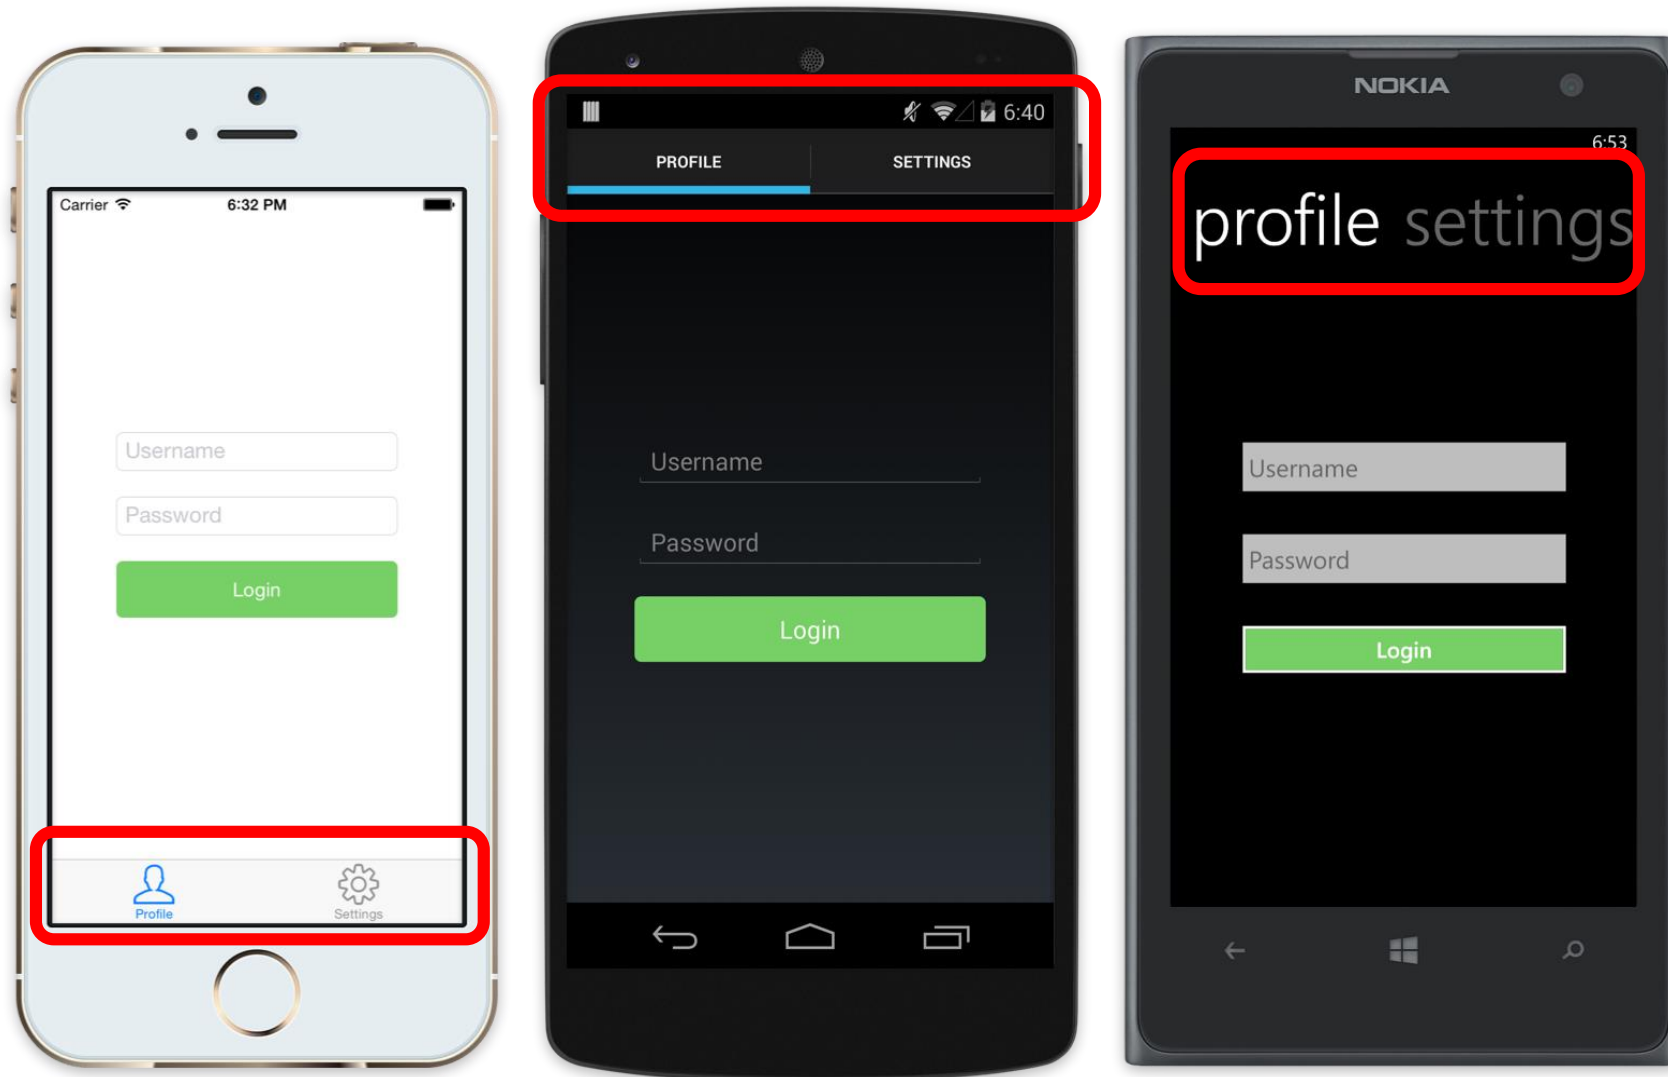

Xamarin.Forms v1.3 - no support for Windows 8.1 or Windows Phone 8.1

Xamarin.Forms 1.4

- Added support for Windows 8.1 and Windows Phone 8.1
- Xamarin.Forms templates do not add 8.1 projects automatically
- Some limitations
 - no support for: maps, gridview, loading embedded resources from another assembly

Xamarin.Forms: Build Native User Interfaces using Shared Code

The Tools

Xamarin Studio

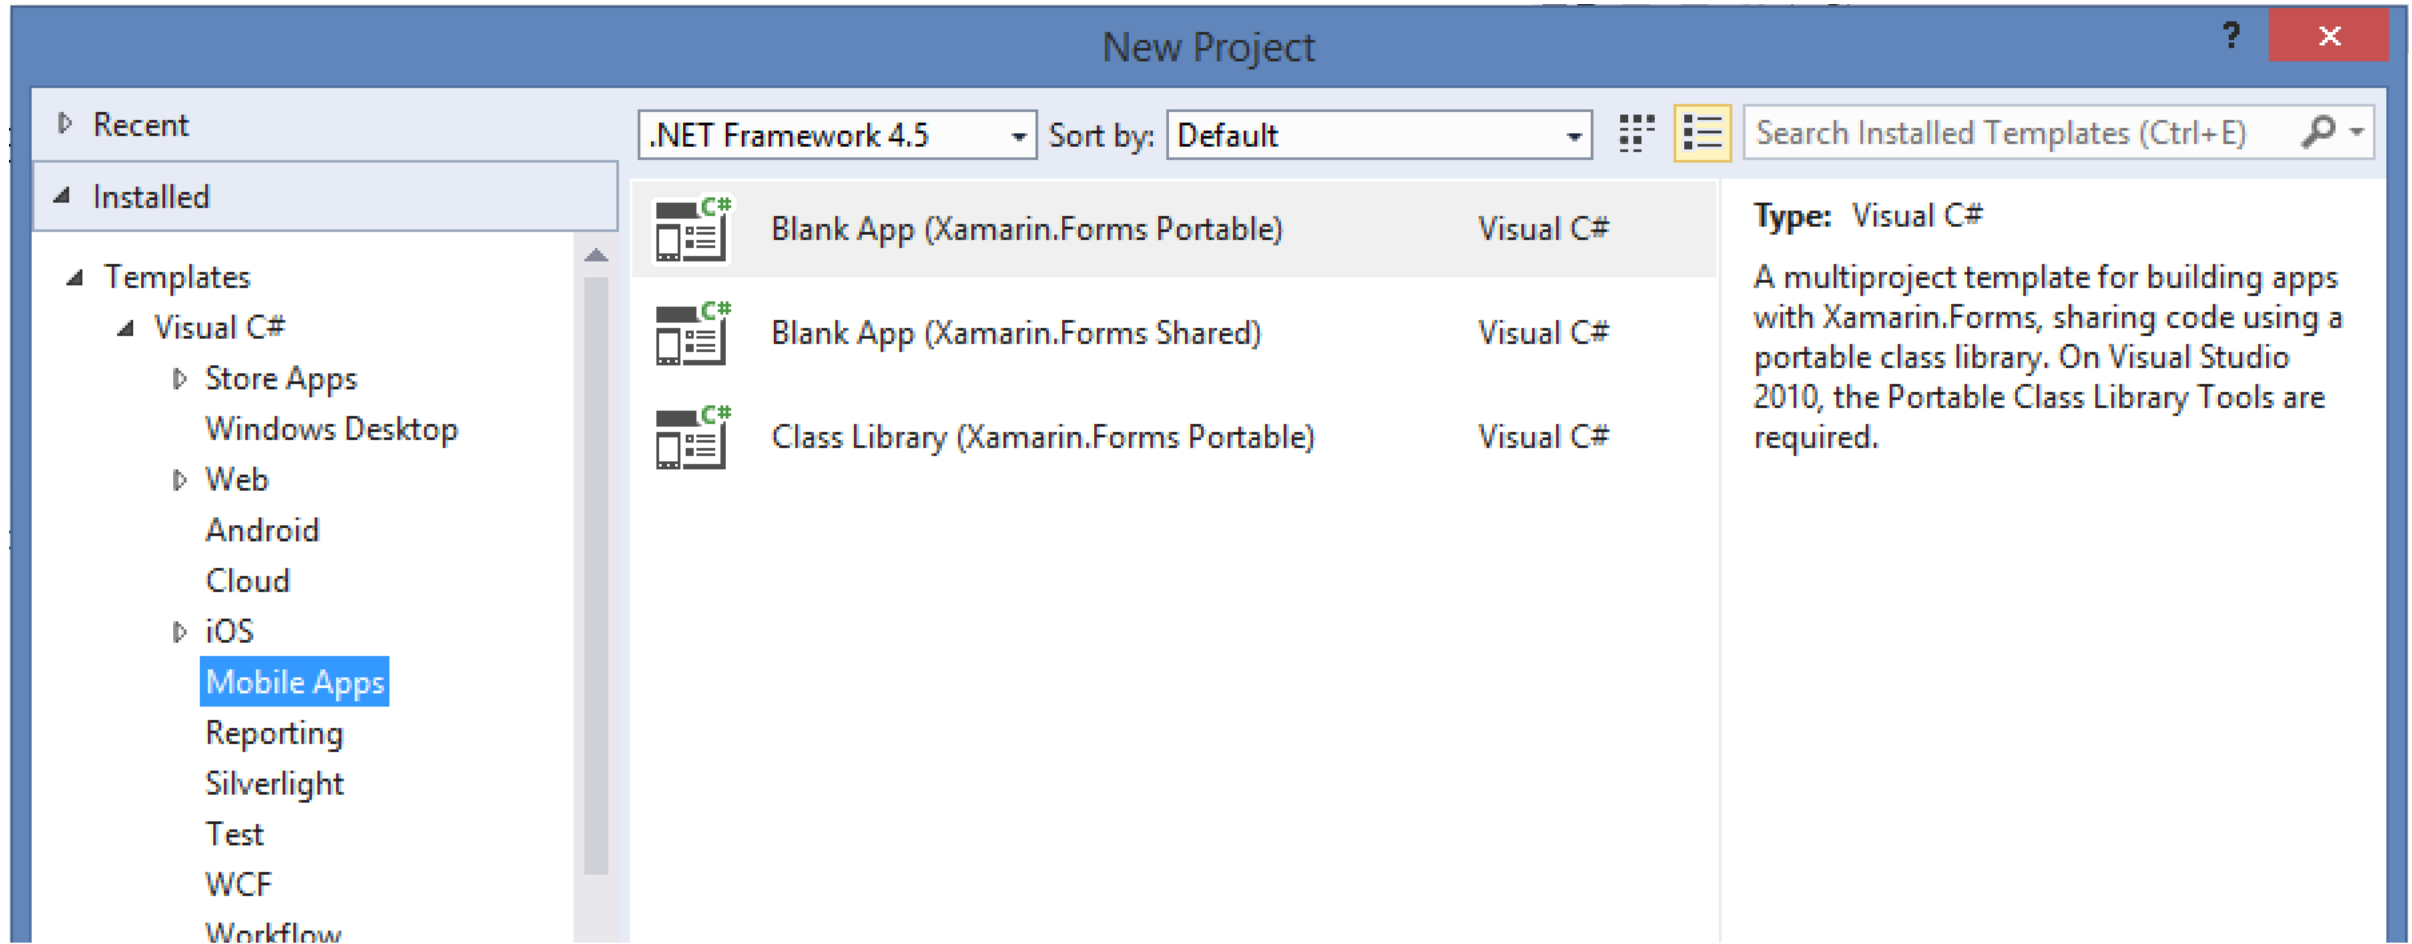

OR

Visual Studio®

+ Xamarin Plug-Ins

Xamarin.Forms Templates

Supports Data Binding

```
-<Button·Text="search"
-----Grid.Row="3"
-----Command="{Binding·SearchCommand}"
-----Grid.ColumnSpan="2"·/>
-<ListView·ItemsSource="{Binding·Places}"
-----Grid.Row="4"
-----Grid.ColumnSpan="2">
-·<ListView.ItemTemplate>
-··<DataTemplate>
-···<ViewCell>
-···<Grid·RowSpacing="5">
-····<Grid.RowDefinitions>
-·····<RowDefinition·Height="Auto"·/>
-·····<RowDefinition·Height="Auto"·/>
-·····<RowDefinition·Height="Auto"·/>
-····</Grid.RowDefinitions>
-····<Label·Text="{Binding·PostalCode}"·Font="Medium,Bold"·/>
-····<Label·Text="{Binding·PlaceName}"·Font="Small"·Grid.Row="1"·/>
-····<BoxView·WidthRequest="200"·HeightRequest="2"·Grid.Row="2">
-····<BoxView.Color>
```

Layouts and Controls

Pages

Content

Carousel

Layouts

StackLayout

AbsoluteLayout

RelativeLayout

ScrollView

ContentView

Grid

User Interface Controls

Entry / Picker	View / Cell	Misc
Editor	BoxView	Label
Entry	ListView	Image
DatePicker	OpenGLView	Map
TimePicker	TableView	ActivityIndicator
Picker	WebView	ProgressBar
Stepper	ImageCell	SearchBar
Slider	EntryCell	
Switch	TextCell	

....and more

Let's see what this looks like...

Platform-Specific Tweaks

Device Class

Static class which enables customization to layout and functionality by platform

Properties	Methods
Device.OS	Device.GetNamedSize
Device.Idiom	Device.OnPlatform
Device.Styles	Device.StartTimer
	Device.BeginInvokeOnMainThread

Device.OnPlatform Example

XAML

```
--<ContentPage.Padding>
-----<OnPlatform x:TypeArguments="Thickness">
-----<OnPlatform.iOS>
-----5,20,5,0
-----</OnPlatform.iOS>
-----<OnPlatform.Android>
-----5,5,5,5
-----</OnPlatform.Android>
-----<OnPlatform.WinPhone>
-----5,5,5,5
-----</OnPlatform.WinPhone>
-----</OnPlatform>
-----</ContentPage.Padding>
```

Code Behind

```
-this.Padding=new Thickness(5, Device.OnPlatform(20, 0, 0), 5, 0);

-Device.OnPlatform(
-----iOS: () =>
-----{
-----|---Padding=new Thickness(5,20,5,5);
-----|---FormTitle.Text="Postal Codes on iOS";
-----},
-----Android: () =>
-----{
-----|---Padding=new Thickness(5);
-----|---FormTitle.Text="Postal Codes on Android";
-----},
-----WinPhone: () =>
-----{
-----|---Padding=new Thickness(5);
-----|---FormTitle.Text="postal codes on wp";
-----});
```

Let's apply some platform tweaks...
